Demonstrate suitable mitigation measures and/or alternative development approaches to protect, improve or restore sensitive surface water features, sensitive groundwater features and their hydrologic functions.
Water Quality and quantity	It is proposed to use the existing well and drainage system			An assessment is generally required to determine potential impacts of development proposals on water quality and quantity. If the proposal is adjacent to a water body such as a lake or stream, wetland, spring or groundwater recharge area, an impact assessment on the water body may be needed. As well, in areas of high water table, fractured bedrock or

Human-made hazards <sup>4</sup> including mine hazards and high forest fire hazards	No	No		Development proposed on abutting or adjacent to lands affected by: mine hazards; oil, gas and salt hazards; or former mineral mining operations, mineral aggregate operations or petroleum resource operations, may be permitted only if rehabilitation measures to address and mitigate known or suspected hazards are under-way or have been completed. Are the subject lands on or within 75 m of existing un-decommissioned oil and gas works? Are the subject lands on or within 1000 m of a salt solution mining well? Demonstrate how the hazard(s) will be addressed.
Contaminated sites	No	No		To determine potential soil contamination, proponents must complete a Phase 1 Environmental Site Assessment (ESA) as per the Ministry of Environment regulation. A Phase 2 Environmental Site Assessment would be needed if the site has potential for soil contamination. Remediation of contaminated sites shall be undertaken, as necessary, prior to any activity on the site(s) associated with any proposed new sensitive use such that there will be no adverse effects.
Crown Lands <sup>5</sup>	No	No		Consult your local regional Municipal Services Office as the first point of contact for assistance in dealing with planning issues relating to proposals requiring the acquisition or use of Crown Lands. Contact the Ministry of Natural Resources District Office

**Notes:**

Class 1 Industry – small scale, self-contained plant, no outside storage, low probability of fugitive emissions and daytime operations only.

Class 2 Industry – medium scale processing and manufacturing with outdoor storage, periodic output of emissions, shift operations and daytime truck traffic.

Class 3 Industry – indicate if within 1000 metres; processing and manufacturing with frequent and intense off-site impacts and a high probability of fugitive emissions.

Hazardous Sites – property or lands that could be unsafe for development or alteration due to a naturally occurring hazard(s).

These hazards may include unstable soils (sensitive marine clays – Leda, organic soils) or unstable bedrock (Karst topography)

Certain areas of Crown Lands are identified by MNR as being of special interests, such as lake access points.

Distances quoted in Table A are approximate and are intended for your guidance in assessing your application.
